

Taking measures to stop the spread of viruses.

MAKE A HABIT OF INFECTION PREVENTATION!

HAND WASHING AND DISINFECTION

TO AVOID RISK

60-80% alcohol sanitizer is said to provide the best effectiveness in hand disinfection.

Keeping your hands wet with alcohol sanitizer for at least 15 seconds is recommended.

It is reported that 30 seconds of use can reduce bacteria by 99.9%, while 1 minute by 99.999%.

※WHO Guidelines on Hand

Avoid these **3** Situations

To Prevent

Mass Infection

Confined spaces

Crowded places

Close contact

Steer clear of these **3 high-risk** moments on your daily life.
